

Our Comprehensive Breast Health Center has undergone renovations!

Previously, because of space constraints, only one doctor was on site at the Center every day. The renovations now allow for two physicians to be present, which increases the number of patients who can be seen on a daily basis. It also shortens the time for treatments to be completed.

Additionally, the comprehensive approach at the center has been strengthened by opening up the floorplan. The Center is now joined directly with radiology services, which will provide enhanced care for our patients.

We believe the renovations will prove to strengthen the quality of care that our patients will receive and the comfort they will feel.
